DETAILED ACTION***Allowable Subject Matter***

Claims 13-25 are allowed. The following is an examiner's statement of reasons for allowance: The claims are allowable over the prior art of record because the teachings of the references taken as a whole do not teach or render obvious the combination set forth, including that of a rotary latch assembly having a rotary latch, a catch, and an actuating member being displaced by an electric motor, where a release member is operative by means of the rotary latch to release the actuating member from the catch for return displacement into a starting portion, where the actuating member comprises a worm helix that engages with the release member, and where the release member displaces the worm along a shaft during rotation of the shaft by the motor for driving the catch into the release position, furthermore, rotation of the latch into the open position disengages the release member from the worm helix, allowing the worm helix to be displaced to the start position by spring force.

The closest prior art of record, U.S. Patent Number 6,019,402 to Arabia, Jr. et al., discloses a rotary latch assembly having a rotary latch, a catch, an actuating member, that comprises a worm drive, displaced by an electric motor, and a release member. However, Arabia, Jr. et al. does not disclose the release member displacing the worm drive along a shaft during rotation of the shaft during a rotation of the shaft by the motor to drive the catch into a release position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show the state of the art with respect to rotary latch assemblies actuated by a motor driven worm gear:

U.S. Patent Number 6,575,507 to Reddmann, U.S. Patent Number 6,386,600 to Kalsi, U.S. Patent Number 6,076,868 to Roger, Jr. et al.
